

**WORLD NOVELTY**  
**WATER-COOLED**  
**SLIDES**

**INNOVATIVE • CLIMATE-FRIENDLY • RESOURCE-SAVING**

# OUR NEW WATER-COOLED SLIDES ARE HERE!

## THE PROBLEM

Stainless steel surfaces are good conductors of heat and reach up to **63°C** in the sun.

A temperature of 39°C is already very unpleasant!

## THE SOLUTION

With the help of our solar-powered water cooling, the lower part of the box slide is cooled down considerably - **sustainable and resource-saving!**

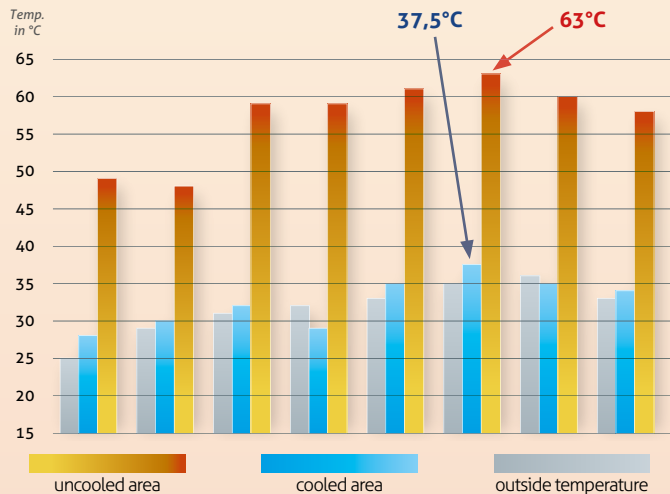

In addition, the water cooling runs in a closed circuit and is **frost-free** in winter!

## THE FACTS

Our tests in August 2020, the warmest month of the year, gave impressive results:

At an outside temperature of 35°C, the uncooled surface reached a temperature of over **63°C!**

The water-cooled area, on the other hand, was a cool **37,5°C**.

That's just above the outside temperature and that for several days!
